

## Amendment to Claims

Claims 1-3 : Canceled.

[ Please amend claims 4 and 9 as follows. Claims 4-13 are listed below. ]

4. (Amended) A method for using a server to provide targeted impression to an Internet client, the Internet client accessing the Internet through a wireless network and the server, the server being configured to have access to a profile database storing profile information regarding the Internet client, comprising:

- AI
- (a) connecting the Internet client to the server through the wireless network;
  - (b) generating an identifier to describe the Internet client, said identifier being only unique during a current server/client session;
  - (c) retrieving, from the profile database, profile information regarding the Internet client with the identifier;
  - (d) forwarding the profile information to a plurality of impression providers to enable said impression providers to determine their offers to be made, based on their own criteria, in real-time, said profile information not uniquely identifying said Internet client beyond said server/client session;
  - (e) said server receiving at least one offer from a plurality of impression providers for a right to make at least one impression to the Internet client;
  - (f) said server selecting an offer based on predetermined criteria;
  - (g) said server forwarding the impression from one of said providers to the Internet client.

5. The method of claim 4, further comprising a step of filtering at least a subset of the profile information based on predetermined criteria during the step of retrieval.

6. The method of claim 5, wherein said profile information retrieved comprises geographical information of the Internet client.
7. The method according to claim 5, wherein the predetermined criteria in Step d) are specified by the impression providers.
8. The method according to claim 5, wherein the predetermined criteria in Step d) are specified by the Internet client.

Q' 9. **(Amended)** A method for using a server to provide targeted impression to an Internet client, the Internet client accessing the Internet through a wireless network and the server, the server being configured to have access to a profile database storing profile information regarding the Internet client, comprising:

- (h) connecting the Internet client to the server through the wireless network;
- (i) generating an identifier to specify the Internet client, said identifier being only unique during a current server/client session;
- (j) retrieving, from the profile database, profile information regarding the Internet client with the identifier;
- (k) said server determining whether at least a subset of the Internet client's profile information is already reserved by a predetermined impression provider, and if so, forwarding the provider's impression to the Internet client;
- (l) and if not reserved, said server forwarding the profile information to a plurality of impression providers, said impression providers deciding their offers to be made, based on their own criteria, in real-time, said profile information not uniquely identifying said Internet client beyond said server/client session;
- (m) said server receiving at least one offer from a plurality of impression providers for a right to make at least one impression to the Internet client;
- (n) said server selecting an offer based on predetermined criteria;

(o) forwarding the impression from the winning provider to the Internet client.

10. The method according to claim 9, wherein the information retrieved from the profile database comprises geographical location of said Internet client.

11. The method according to claim 9, further comprising:

- Q1
- (p) the server monitoring the Internet client's response to the impression;
  - (q) the server modifying the profile database for the Internet client based on the Internet client's response to the impression.

12. The method according to claim 9, further comprising:

- (r) the server caching impressions supplied by a plurality of impression providers;
- (s) the server forwarding one of the impressions to the Internet client upon a successful bidding by one of the impression providers.

13. The method according to claim 9, further comprising:

- (t) the server caching impressions supplied by a plurality of impression providers;
  - (u) the server also caching standing bids reserved by the impression providers, the standing bids being reviewed when the retrieved user profile for the Internet client matches a predetermined set of criteria;
  - (v) the server determining which one of the standing bids is to be invoked;
  - (w) the server forwarding one of the cached impressions to the Internet client upon the standing bid.
-
